Backend & AI Platform Engineer

PROFESSIONAL SUMMARY

Backend engineer focused on building and operating systems for agentic development. Six months of daily multi-agent orchestration: running parallel coding agents, authoring repository instructions and skill modules, and benchmarking outputs with weighted rubrics. Ships end-to-end tooling: TypeScript and .NET services, agent session supervision, git-worktree isolation, run locking, CI gates, and comprehensive test strategies.

AGENTIC ENGINEERING & DEVELOPER TOOLING

- **Multi-model agent debate orchestrator** (TypeScript/Bun, 9 test files): Two agents draft, critique, and rebut a feature spec in **isolated git worktrees**, followed by a synthesizer agent that produces a unified implementation plan. Enforces single-run concurrency via a self-clearing PID lock, guarantees atomic plan writes through temp-file `rename`, and includes a live run TUI.
- **Agent output evaluation and rubric benchmarking**: Built a weighted rubric (acceptance 40 / architecture 20 / failure 15 / verification 15 / simplicity 10) scoring agent-generated plans against a **reference revision**. Designed the harness to validate category weight sums and abort on discrepancies to prevent scoring drift.
- **burrow (agent session supervisor)** (public, TypeScript/Bun): Mobile-compatible remote for coding agents. Runs one process per session in an **allowlisted repo** using stdio RPC protocol v2 (dialog answering, subagent progress). Gates requests via matching host identity headers, blocks concurrent session takeovers, and tests protocols locally via isolated mock ports without live LLM calls. CI gates on main and PRs: install → typecheck → build → test.
- **Agent skills, repo instructions, and MCP wiring**: Authored **26 agent skills** across production repositories, including a read-only dependency auditor isolated to `Bash` and `Read` permissions, an architectural security review skill, and project-specific frontend standards. Connected **MCP servers** (Azure DevOps, SQL Server) to let agents execute workflows against live environments with human approval at diff boundaries.

WORK EXPERIENCE

Software Engineer, *Arquail* May 2026 to Present

- Lead core backend architecture: design production REST APIs, define data schemas, and manage platform integrations.

Software Developer, *Sonnix* Aug 2025 to Present

- Guided backend architecture from design through production deployment and maintain ongoing system reliability.
- Deployed containerized Docker services across isolated internal networks; monitored high-concurrency data paths for race conditions and transactional consistency.

Software Developer, *Quantix L.L.C* May 2024 to March 2026

- Improved relational database query performance by 40% via index tuning and query optimization; integrated Gemini (GCP) and OpenAI workflows into production APIs.
- Built structured routing, middleware, and centralized error handling across services; authored technical documentation and integration test suites that reduced team onboarding time.

Software Developer (Freelance), *Self Employed* Oct 2019 to Present

- Deliver full-stack client applications using .NET Core (Clean Architecture, centralized package management, integration tests) and TypeScript/React.
- Automated delivery via multi-stage **Azure Pipelines** using branch-to-environment promotion, Docker containers, Kubernetes/Kustomize overlays, and SonarCloud analysis.

TECHNICAL SKILLS

- **Agentic & AI:** Multi-agent orchestration, autonomous coding agents, agent skills, repo instructions, rubric benchmarking, MCP, LLM integration (Gemini via GCP, OpenAI), workflow automation.
- **Languages:** C#, .NET Core (ASP.NET Core), TypeScript, Node.js, Bun, Python, SQL.
- **Workflow & Platform:** Git/GitHub, CI/CD (GitHub Actions, Azure Pipelines), testing (Vitest, Testing Library, `bun:test`, .NET integration tests), typecheck/lint gates, Docker, Kubernetes/Kustomize, SonarCloud, GCP, PostgreSQL, SQL Server, EF Core, Redis, CQRS, REST APIs.

EDUCATION

BS in Computer Information & Technologies, *Rochester Institute of Technology (RIT Kosovo)* May 2026

- **GPA: 3.82** / **4.00** | Dean's List (8 semesters)
